collocations are both pervasive in language and difficult for language learners even at an advanced level in this book these difficulties are for the first time comprehensively investigated on the basis of a learner corpus idiosyncratic collocation use by learners is uncovered the building material of learner collocations examined and the factors that

contribute to the difficulty of certain groups of collocations identified an extensive discussion of the implications of the results for the foreign language classroom is also presented and the contentious issue of the relation of corpus linguistic research and language teaching is thus extended to learner corpus analysis

this edited collection presents the state of the art in research related to lexical combinations and their restrictions in spanish from a variety of theoretical approaches ranging from explanatory combinatorial lexicology to distributed morphology and generative lexicon theory section 1 offers a presentation of the main theoretical and descriptive approaches to collocation section 2 explores collocation from the point of view of its lexicographical representation while section 3 offers a pedagogical perspective section 4 surveys current research on collocation in catalan galician and basque collocations and other lexical combinations in spanish will be of interest to students of hispanic linguistics

this volume brings together original research in the four areas of l2 collocation learner corpora l2 collocation lexicographic and classroom materials l2 collocation knowledge assessment and l2 collocation learner processes each area is covered by three research chapters and a dedicated commentary chapter by experts in the field

the series serves to propagate investigations into language usage especially with respect to computational support this includes all forms of text handling activity not only interlingual translations but also conversions carried out in response to different communicative tasks among the major topics are problems of text transfer and the interplay between human and machine activities

abstract early systems for word sense disambiguation wsd often depended on individual tailor made lexical resources hand coded with as much lexical information as needed but of severely limited vocabulary size recent studies tend to extract lexical information from a variety of existing resources e g machine readable dictionaries corpora for broad coverage however this raises the issue of how to combine the information from different resources thus while different types of resource could make different contribution to wsd studies to date have not shown what contribution they make how they should be combined and whether they are equally relevant to all words to be disambiguated this thesis proposes an integrated model as a framework to study the inter relatedness of three major parameters in wsd lexical resource contextual information and nature of target words we argue that it is their interaction which shapes the effectiveness of any wsd system a generalised structurally based sense mapping algorithm was designed to combine various types of lexical resource this enables information from these resources to be used simultaneously and compatibly while respecting their distinctive structures in studying the effect of context on wsd different semantic relations available from the combined resources were used and a recursive filtering algorithm was designed to overcome combinatorial explosion we then investigated from two directions how the target words themselves could affect the usefulness of different types of knowledge in particular we modelled wsd with the cloze test format i e as texts with blanks and all senses for one specific word as alternative choices for filling the blank a full scale combination of wordnet and roget s thesaurus was done linking more than 30 000 senses using these two resources in combination a range of disambiguation tests was done on more than 60 000 noun instances from corpus texts of different types and 60 blanks from real cloze texts results show that combining resources is useful for enriching lexical information and hence making wsd more effective though not completely also different target words

make different demand on contextual information and this interaction is closely related to text types future work is suggested for expanding the analysis on target nature and making the combination of disambiguation evidence sensitive to the requirements of the word being disambiguated
